

ABSTRACT OF THE DISCLOSURE

5 A disk cartridge which allows for the user to know
what contents are recorded in which disk cartridge
without the need of reproducing the disk cartridge, a
method of manufacturing the same and a
recording/reproducing system using the same have been
provided, in which the disk cartridge is accomplished by
incorporating the optical disk in a case, a recording
10 surface of the optical disk is comprised of an annular
inner area, a clamping area, a transition area, an
information recording area and a rim area, which are
arranged from inside to outside in radial directions of
the optical disk, and disk cartridge identification
15 information is recorded in the transition area of the
optical disk, and also the disk cartridge identification
information recorded in the optical disk is provided
discernibly from outside the case.
